# THE BREATH OF PROPHET

THE ART  
OF  
WIND  
SYNTH

## THE BREATH OF PROPHET by THE ART OF WIND SYNTH

Welcome to THE BREATH OF PROPHET soundbank, 10 demo presets for the [Dave Smith Prophet Rev2](#) synthesizer that are custom programmed and designed for use with wind controllers. You will find lots of amazing and expressive solo sounds, analog synth leads, funky sounds, dirty synth leads, synth strings, fat basses, chorded leads and much more . . .

All presets are open, and you can edit each preset to your own. I played and tested them using my AKAI EWI 4000s and EWI 5000 but on other wind controllers such as Roland Aerophone or Yamaha WX it should not be a problem. These sounds require breath controller data ( MIDI CC2 ) in order to make any sound. For optimum playing response I recommend not transmitting aftertouch, modulation, expression, or volume data. I noticed that it's worth turning off portamento and glide settings. Be sure to listen to the audio demo of this soundbank on my Youtube and Soundcloud profile ( @theartofwindsynth ).

### **Instal notes:**

These patches will load onto bank 1 ( U1 P1 to U1 P128 )

\*\*\* Take note - U1 P1 to P128 will be overwritten!

### **How to get the soundset onto your DSI Rev2:**

Step 1. Download a sysex program such as [Sysex Librarian](#) ( Mac ) or [MIDI/OX](#) ( PC ).

Step 2. Connect the DSI Rev2 to your computer via USB or midi. You must tell the Rev2 whether you are using USB or MIDI by selecting Global and number 10 ( MIDI Sysex Cable ).

Step 3. Open the sysex program, find and select 'Prophet Rev2'. Select 'add' or '+' to find and add the sysex file to the program.

Step 4. Press play or double click on the soundset in the program and the sounds should now start to import to your synth. If they do not, check your global settings and make sure that USB ( or mid if using a midi cable ) is selected on numbers 8 and 9.

## To Back Up Your Patches

Select global and then number 29 ( Dump Bank ), ensuring USB or MIDI is selected as before. In the sysex program select 'record many'. Hit 'write' on the Rev2. The full bank of patches will now be sent to and stored on your computer via the sysex program.

## End User License Agreement

- You may use the contents of this product for your personal and commercial musical compositions.
- You may not use any contents of the product in any sample library or similar collection of sounds, or to create sounds for other software or hardware products.
- This product is licensed "as-is" without any warranty, or guarantee of satisfaction. The makers of this product are not responsible for any direct or indirect damages or loss arising from use of this product in any form.
- The makers of this product do not guarantee nor support use or compatibility of the product beyond its original published specifications.
- By using this product you agree to comply with all terms of this agreement.

Please enjoy the sounds! :)
